

PROJECT FIRSTLINE

CS120288-A

## Implementation Tip

Activity Based Scenarios  
Infographics

From hospitals, to outpatient settings, to nursing homes, Project Firstline has [interactive resources](#) to help you increase and test your infection control knowledge no matter your healthcare setting. Interactive resources assist in understanding how to apply basic infection control practices, and learn where germs live in healthcare to recognize the risks for them to spread.

## Micro Learning Resources are Here!

- 1) Print Materials. Project Firstline offers shareable infection control resources for healthcare facilities and providers. Spread the word about these helpful infection control tips with printable learning aids. Use the posters, infographics, lock screens, and more to help keep everyone at your facility feeling confident about their infection control decisions.

## 2) Micro-Learns:

- are a series of guided infection control discussions
- are brief, on-the-job educational opportunities
- can be incorporated into existing opportunities where groups of healthcare workers gather, such as pre-shift "huddles" or team meetings

Health care workers can easily apply the key points to their daily work and perform the recommended actions to keep germs from spreading.

## Survey Says

We want to know about how your Project Firstline instruction is going. Take this short, less than 5 minute, [survey](#) to detail your Project Firstline experience.

## Upcoming Events

Coming in March

Interactive Resources Toolkit

This toolkit will provide new and fresh interactive resources that will not only generate excitement about infection control practices, but will encourage students to share stories of practical application outside of the classroom. These resources will support all healthcare workers' infection control actions, correctly, everyday.
